FBA 411

FBA 411 (PROF) -> (WPS) femi (DR Akintunde).

TOPIC: STrategic Process framework

What is a strategy: Strategy is planning while strategic process is the process of planning.

Environmental Scanning: Under this, we have the mission and vision and its elem nt are internal and external environment. E.S has to do with researching.

Strategic formulation:

(b) Prof Abdul-Hamed Sulaimon FBA 411 (screen shots).

Topic: polices, decision making, goals and objective.

The term policy are general guidelines to managerial decision making.

examples of policies * production policies, personnel policies etc.

What are the policies that will guide in preparing our policies

Characteristics of policies.

i) It last for a long time ii) It can be expressed in qualitative condit

3) Policies might be in pyramid where we have lower & higher level olicies

4) Policies are flexible i.e subject to change

Decision making.

Making choice out of several alternatives.

Types of Decision. (8 TYPES)

* though they are not mutualy exclusive. ie they are not completely independent of one another

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

Organisational vs personal decision: organisational decisions taken based on your official position. Personal decision: These are decisions taken as an individual reason why I decide not to eat. Note: organisations should be interest in the personal decision of their employee.

* Basic vs Routine Decision: Basic decision are unique fundamental in nature and are taking once in a year. eg A decision of Plant location, recruitment of key employees, this decision can last for 5yrs 6 yrs. Take time so the org will not be affected.

Routine decision: Decision on a daily basis as it requires no stress.

Programmed vs Non-Prog: programmed decisions are taking in. sort about, rules & procedures while Non-prog. they are taken discretionally.

Rational vs Administrative decision: Rational D. taken based on careful scientific thought decison- they are seen as perfect decision.

Administrative decison: decisions taken that might not be p...

Decision Evironment:

We have three ① Decision making under certainty: Here all the information about a situation available and all alternatives are available.

② Decision under Risk: Here complete informations are not available but you can estimate to make decision

(a) Decision under Uncertainty: probability cannot be assigned. It is so difficult eg changes in the environment.

Process of Decision making:

Int * 1) Preception of disequilibrium: recognising that there is a problem or opportunity. < that is ability to explore.

2) Dig Diagonis i.e investigation where questions are raised.

Scanned by TapScanner

State the problem. 4) Generate alternative course of action & what are my options to take based on the situation at hand. 5) Evaluate the alternative: if this is not done, you might choose the wrong one 6) Make a choice 7) Implement the action

Barriers to effective Decision making:

* Information. *

Corporate goals and objectives

goals are what we intend to achieve in a future period of time & goals are broad. goals are qualitative in nature and can be quantitative when they are objective.

objectives are narrow that is they are small goals

objectives are the desired outcomes of a firm.

Note: key functional areas are personnel, account, finance.

Illustration. the verb their is "to Increase output per worker specific cost < ₦5000 at 10hrs & the specific date is Jan 1

Roles of objective.

If you dont set objectives, you

characteristics

- Specificity * Attainability * Naturability. * correlation.

* Acceptability:

Th'a Smart Characteristic.

Specific: Your objective should be Specific

Measurable: How far have I gone. * Attainable * Realistic

Time bound.

Scanned by TapScanner

24/01/22.

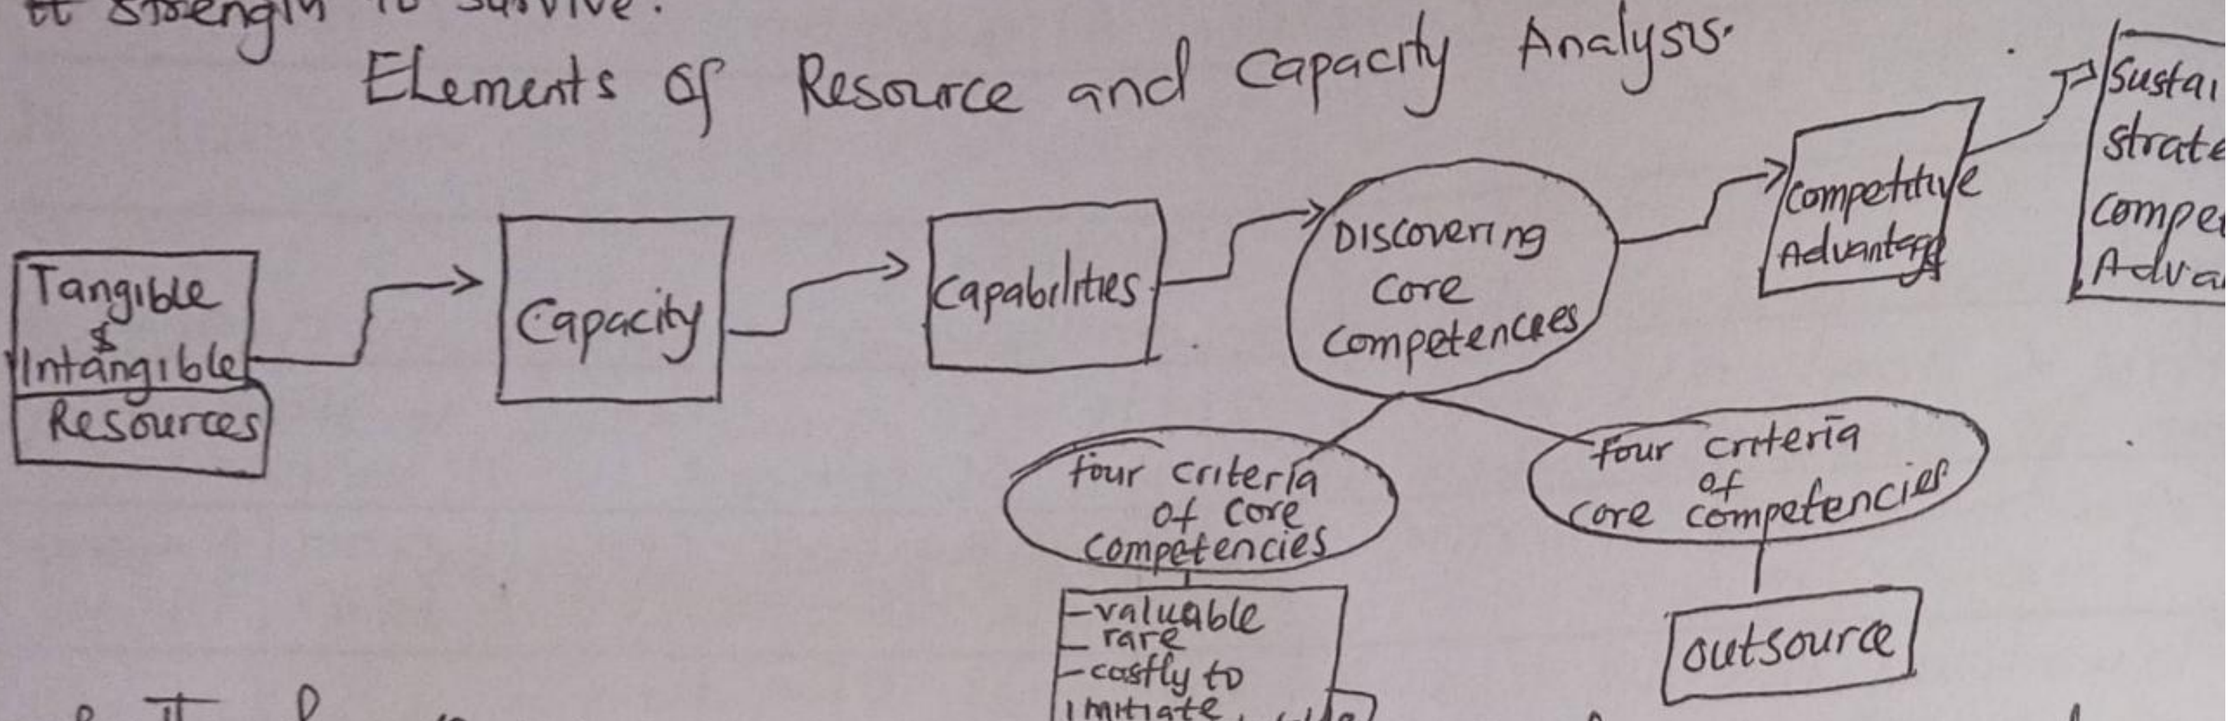

Prof. Adebisi FBA 411.

Topic: Internal Analysis in Strategic Management.

*Components of internal factors are: * Strength * Weakness.

Note: for any organisation that will survive, Competition is very important a the weakness of an organisation makes the competitors to win. for an org to they must discover the weakness of their competitor. & org must also c tt strength to survive.

Elements of Resource and capacity Analysis.

Note: The strength talks about the resources. Every firm has resources. and

*Tangle Resource → Money, man/personnel, material, machine, building
Intangle resource → Brand Loyalty, Goodwill, copyright & patents
Analysis Under the Tangible and intangible Resources are:

*Q_1, Q_1 = Quality, Quality → i.e If the org needs 10 staffs, are the ten staf of good quality. Be sincere to know those who have the required quality.

Note: The aim of this topic is to discover your strength, use it against others and understand and correct your weakness by using your strength against oppone

*Q_F, Q_F → Quality (the org is the best)

*Q_1, Q_2 = Quality, Quantity → i.e if the org needs 10 staffs, 5 staffs with the quality required and the other staffs can also be of helping hands to help the org grow. (the org is better).

*Q_2, Q_2 → Quantity, Quantity → i.e If the org needs 10 staffs, all the staff has no quality required. the org will find it difficult to compete bcos no good personnel.

Note: The best org can have is Q_1, Q_1 or almost Q_1, Q_2.

B) Capacity: This is when the organisation uses the resources tangible and intangible to make production.

Scanned by TapScanner

Capabalities: These are those strength that are specific to a firm, that gives the firm the opportunity to do better than other competitors. It gives the company upper hand. firms that are able to take their capacity to capability are able to survive while competing. Although this point is full not the point where org to relax.

Discovery Core Competencies: These are capabilities of the firm that will clearly displace the capabilities of other competing firm. These are not very easy to procure or acquire in an org. It is from capabilities we discover "Core Competencies". for we to say we have gotten core Competencies there are four criteria required which are.

* valuable: customers must rate the org to be more valuable compared to other organisation. i.e the org must be ready to add additional values to their production, that can be easily preferred by customers
* Rare: A capability is rare only when it is only firm that has the capability to produce that capability. As the competitors can identify the firm that is entitle to do it.
* costly to Imitate: Competitors will want to produce that same capability that makes you different. It will be exhabitant for them to produce such service or product.

x Non substitutable: When competitors discover that it is difficult to imitate then they decide to produce a substitute goods that can give same satisfaction. If all their efforts fails that implies that the company is has gotten it capability eg cocacola company can not be compared to Big1 product.
Note: customers must not get the same level of satisfaction from the substitute product. Cocacola product possess the four criteria needed.

x Outsource: This is when org has to hire or involve consultants to help train the staffs in order for the company to survive in the market.

Competitive advantage: When a firm product or services are consta
preferred by the consumers & customers in relation or com
competitors product. It is also when a firm has cost adva
~~and~~ <i.e you can produce at a cheapest price) & selling a
<i.e your product is bought at higher price and you ha
power to reduce your price.

Sustainable Strategic competitive Adv.: This is when a company ensure
they are two or three steps ahead of the competitors. at ever
point in time. eg creating new design, create premium servic
i.e giving competors an edge to want to reproduce or recreat

03/02/22. FBA 411 <DR TONY>

Topic: Strategic Management.

Strategic management involves four models which are:

I) Environmental scanning II) Strategy formulation.

III) Strategy Implementation IV) Strategy evaluation.

~~These~~ Management is the process of planning, organing, leading, Controlling and evaluation of organisational resource in order to achie organisation goals.

Strategic management is a very flexible concept that enables one to ~~dir~~ diverse a concept to achieve a particular goal.

Strategy Managt: is a systematic process that involves environmental scanning, strategy formulation, Strategy Implementation & S. evaluation of cross functional decision making processes for the purpose of achieving

Scanned by TapScanner

organisation goals and objective.

Environmental Scanning: This entails the systematic process of gathering information about the internal and external environment and the discermination of these information to key Strategic Individuals for the purpose of making decision. i.e gathering vital information about the environment to be provided to relevant people that will use it to make decision). The internal environment comparises of factors, forces, variables that are within the scope of the buz org, and the buz org have absolute control over them (i.e the org can decide to change or alternate them). eg organisational resources, organisational structure, organisational culture, organisational capabalities.

organisational ~~outs~~ resources → are the four M (Man, money, machine, (4m). materials.

organisational structure is a frame work that manages the relationship btw people, position and resources and how these resources have been allocated.

organisational culture: The way things are been done in an org

organisational capabalities: The ability of the firm to be able to use the resources it has to gain competitive advantage.

B) External Environment: These are the factors, forces, variables that are outside the scope of the buz. org that the buz org has little or no control over them.

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng
Scanned by TapScanner

The external environment includes the following → PEST, PESTEL
* political * Economical * socrocultural * Technologi
* Ecological * Legal * competitors.

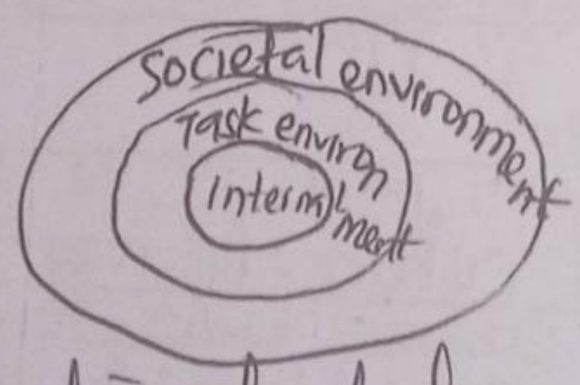

over the years, We can see that some persons can now manip
these external environmental factors (PESTEL).

Note: Ideally a market should be a perfect competitive market but
Our country we prefer a "Monopoly market" where only individual e
and remains the richest.

2) Strategic formulation: The information gathered is use to make strat
decisions, policies, procedures, planes for the purpose of achieving
organisational goals - (strategy is a course of action used to achie
goals).

3) Strategic Implementation: This is the process of executing the Str
-gy i.e the execution stage.

Strategy Evaluation: This involves performance appraisal to check if we
are actually in line with the predetermined or pre-proposed goals or
strategy. If there are deviation, then we make necessary correction
This step enables us to check mate. If the org is still in line and if
there is deviation, take corrective measure to return back to the
organisational

Topic: Industry Analysis.

Theortical, We belief that the environment is divided into two (internal
on a real sense we have: societal environment (external, Tax environment
* Task Environment: This comparises of stakeholders that have Interes
in the buz operation activities and the business also have som
buz also affect them eg Creditors, regulators, agencies,
suppliers, Labour Union, Communities, Customers, shareholders,

Scanned by TapScanner

nternal environment →

Societal environment or external environment → eg Pestal C & govern ment

Note: The task environment affects all industries in different firms in that industry

i.e His peculiar to different industry i.e wat happens in industry A is diff from industry B.

Societal Environment affects all industries in diff dimensions, magnitudes and degrees

A firm is a singular unit of a business that operates in a particular line of biz or serves.

Industry: is a collection of firms in the same line of business.

Industry Analysis: (Micheal porter model)

5 forces model.

This model is a used to analyse the industry why a firm will be doing better than another firm in the same industry.

i) Threat of new entrantes.

Industry analysis refers to an indebt examination of key factors within a corporation's task environment.

The natural, the societal and task environment must be monitored to detect strategic factors that are likely in the future to have a strong impact on corporate success or failure

The Micheal Porter model composes of 5 (assumptions) models:

i) Threat of of new entrants:

factors that let the baniers of new entrants.

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

A) Capital requirement: There are some business that requires large capital so these C.R serves as artifical barrier to new entrances for most businesses large capitals are required.

B) The Government Licensing: Government can also serve as barrier to new entrance by giving some restriction the will probably required govt permit or license. If the govt is not interested in you, the license will not be g
Note: Sales of arm guns etc.

C) Economies of scale: These are encentives or benefit an or -ation get for producing in large quantity < mass product
Economies of scope: This is the benefit a firm gets for u a particular resources to produce different things or use resources for different purpose. eg using a class-roo for church, video or game house, tutorial venue etc.
Note: Under economies of scale, the producers ensures that p products are produced at mass quantity because they have adequate knowledge of the market. Eg the company can producing at the cost price of ₦10 to sell at ₦15 whiles th new entrants that have little or no knowledge of the m can only produce at the C.P of ₦13 to sell ₦15 - the ex of make still have edge over other companies or competitor

D) Access to distribution channel: That is do you have access to distribute your goods from the production unit to the cust eg Having a plantain buz without knowing who to supply to

E) Intensity of rivalry among existing firms: This explains the how to or extent or rivalry that exist in a particular market. Eg A co productum from foreign countries competing with Local cars produ in Nigeria. Note: The intensity in a market will or can dot if a ne firm can come in or not.

F) The switching cost: ability to switch from one brand to anot (If is difficult)

Scanned by TapScanner

b) Number of competitors: The higher the competitor, the more intense the market will be.

c) The rate of industry growth:

3) Threat of substitute goods: This is different goods performing different functions they also serve as barrier and increase the level of competition in the market. sub. goods is the threat that new market will get when trying to gain the market one of the factors that affects it is high switching cost.

a) high switching cost:

b) product differentiation.

4) Bargaining power of buyers: This is the ability to determine or decide what happens in the market.

5) Ability of the firm to backward integrate: Ability of the firm to perform the functions formally done by it's suppliers (suppliers have low edge)

*foward integration: ability of a firm to perform the functions formally done by its distributors.

Note: backwards integration reduces the edge their suppliers have as their bargaining power of supplier will fall.

b) If the buyer buys a larger portion of the goods, the bargaining power of the buyer is high.

c) If the buyer earns low profit but are very sensitive to cost, & constitute large proportion.
then the bargaining power will be high.

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

5) Bargaining power of suppliers

i) When the suppliers industry is dominated by few but sells to many.

ii) When the product is unique and has built up switching

iii) When the suppliers are able to forward integrate

iv) When substitutes are not readily available.

Author: DR Ifere. Topic: Corporate level Strategy

Corporate level Strategy: This is about the scope the org wants to operate on. The Management makes the vital decision. Under corporate strategy we consider the market, portfolio of product

Functional strategy are the; finance, production, marketing and Huma

The decision to produce bread is C. strategy.

Strategy is the means we want make the money; i.e to achieve the objective < which is to make money.

Functional strategy: This entails how finance, production, marketing & HR are used in the buz.

Strategy is the means by which a company wants to achieve it objectiv

C.L.S. → This has to do with the scope of the company.

*The scope is the portfolio of product i.e what do the company we to Produce eg cement, bread. Before you carry out strategy the company must have an objective; the scope of market i.e the place the product can be

Note: Industry (Proxy) means product.

Industry is a group of firm that offer similar product.

Vertical integration is operationalized toward backward integrat or forward integration < downward (retail sellers) → middle (refining) → up stream (mid-stream).

Scanned by TapScanner

backward.
Under forward integration is when I set up my own textile mile where I can get materials for cloths rather than buying from other company
2nd definition
direction deals with the kind of product you want to produce.
scope deals with the product you want to sell, the market where the product will be sold.

The Specific Corporate L. Strategy (There are four basic strategy). OR (H) main dimension

1) The growth strategy: you want to expand the company. or expansion
2) Stability Strategy 3) Retrenchment. 4) Combination. (combining)

A) Expansion / Growth strategy: for a company to grow, you either go to a new market or produce a new product. by (Ally). To grow or from diversify into Concentration is of essence. Concentration is the number of firm in an industry that controls the large part of the industry eg Dangote Company has concentration in cement product i.e cement product is highly concentrated. Another way is diversification → i.e diversifying into diff areas or similar product. eg Dangote diversifying from cement to other sectors such as food sectors. A firm Carry out Related diversification or Unrelated diversification or the same

*Related diversification: This is when you can use your present assets e.g human Resource, etc to make production of a new product e.g bread & cake raw material
This helps to minimize risk ie related diversification.

*Unrelated diversification: This is when a company uses different. asset, materials & equipment to produce a new product eg softdrinks and clothes.

Note: Unrelated D. is also known as "Conglomerate".

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

Conglomerate company are company's that have subsidiary that unrelated product eg Uni-lever, dangote.

Conglomerate Discount: This explains how firms loss money in keeping departmental heads who cannot add value to the unrelated product that is newly introduced to the company. This occurs under Unrelated diversification. eg An expert in finance department under food sector might or will not be an expert under textile production.

Under growth Strategy → we Considered "Diversification", "Concentration" and "Integration".

Economics of Scales & Economic of scope.

Economics of scale: This is when a firm uses the same asset to produce more quantity. The average fixed cost reduces but the variable cost increases with the quantity produced.

Economics of scope: This is using the same asset to produce different thing or different production. eg A room been used for church, tutorial, video house. Economics of scope is an advantage of related diversification.

ii) Integration: This is another technique of growth strategy.

* Vertical integration: This includes backward and forward integration.

Backward integration: set up sugar cane extraction rather an importing the sugar

forward integration: set up decision to start selling petrol rather than giving it out to petrol station to sell

Horizontal extraction: This is about complementary product acquisition because they have a better strength than you. eg production of coffee then you decide to produce coffee milk. eg Microsoft & Nokia.

iii) Co-operation is also a means to expand business through merger and aquisition. A firm is advised to embrace M&A because of the mutual advantage they derive.

Scanned by TapScanner

Internationalization: This expansion beyond domestic market.

B) Stability: This is an approach or decision the company makes bcos they don't want to expand above a particular level. They don't want to take more risk or dilute the management

c) Retrenchment: This is not about sacking staff but the implication is that some staff will be sack. This is closing or removing a product line that is no longer productive. eg closing production of Indomie depar tment bcos the sector is no longer profitable.

Re-structuring: This is finding the right size: eg the staff you have is not enough so employ more or you need to employ more hand

Re-structuring entails a company aiming to do better to achieve better. It could be debt to equity ratio. This is stopping a product line or activities of an area that is not profitable any more. -eg when a company has more debt, they can decide to bring in more shareholder to increase the company equity.

Combination: This is using the combination of using retrenchment and expansion simultaneously.

eg Ane Under forward integration spar at yaba make their bread & sell by themselves.

Professionalism & Excellence

09/02/22

FBA 411 { What are the 5 Ps of strategy Assignment } → DR Okonji

Topic:

The strategy process has 4 major parts which are formulation, implementation, evaluation and control.

Note: Strategy is like the vehicle for an organisation.

What is Strategy: This is a plan, method or ~~steem~~ scheme an org wants to use to achieve it objective.

Levels of strategy.

* Coporate level * Functional level * Business level
* Operational level strate.

What is corporate level strategy: strategy is concerned with three question where, who, ~~How~~ and what.

* In which industry and market should the org engage in
* What buz should the org involve in.
* Where should they carry out the business

It is important to note the org stability & growth.

* How do you are compete or serve.

Corporate strategy is concerned with decisions about the set of business or businesses that the org should compete in as well as the method of capturing cross-business synergies and turning them into competitive advantage.

What is Synergy: This is when two org department in an org comes together to achieve a greater output. i.e the sum of the whole must be greater than the sum of the part.

Topic: E
What

Topic: Environmental Appraisal.

What is business environment: These are factors that affects positively or negatively the operation of the business.

* Internal environment * External environment.

* Task/micro/operating: These an Individual org operates and inter-act with frequently and org needs them to survive eg customers, employees & unions), suppliers, distributors (middle-men), Relevant Host Government agencies, competitors, communities, pressure groups etc. The company must establish a good relationship with them in other to survive. They benefit from the org & the org also benefit from them. These individuals are called the STAKEHOLDERS.

* General/Macro: Under this we have PEST or PESTEL-Environmental Analysis: This is trying to study or predict how the environment will be and making relevant decision regarding your study.

The environment is the source of change. It is only when you study or monitor your environment that you can discover the change and explore on your environment.

4 things we want to do in the environment & 4 thing under Environmental Analysis

1) Environmental scanning: When you want to get a general survey of the environment, i.e trying to study thing happening in the env

2) Environmental monitoring: Monitoring is done to find out whether is affecting our bus in the environment,

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

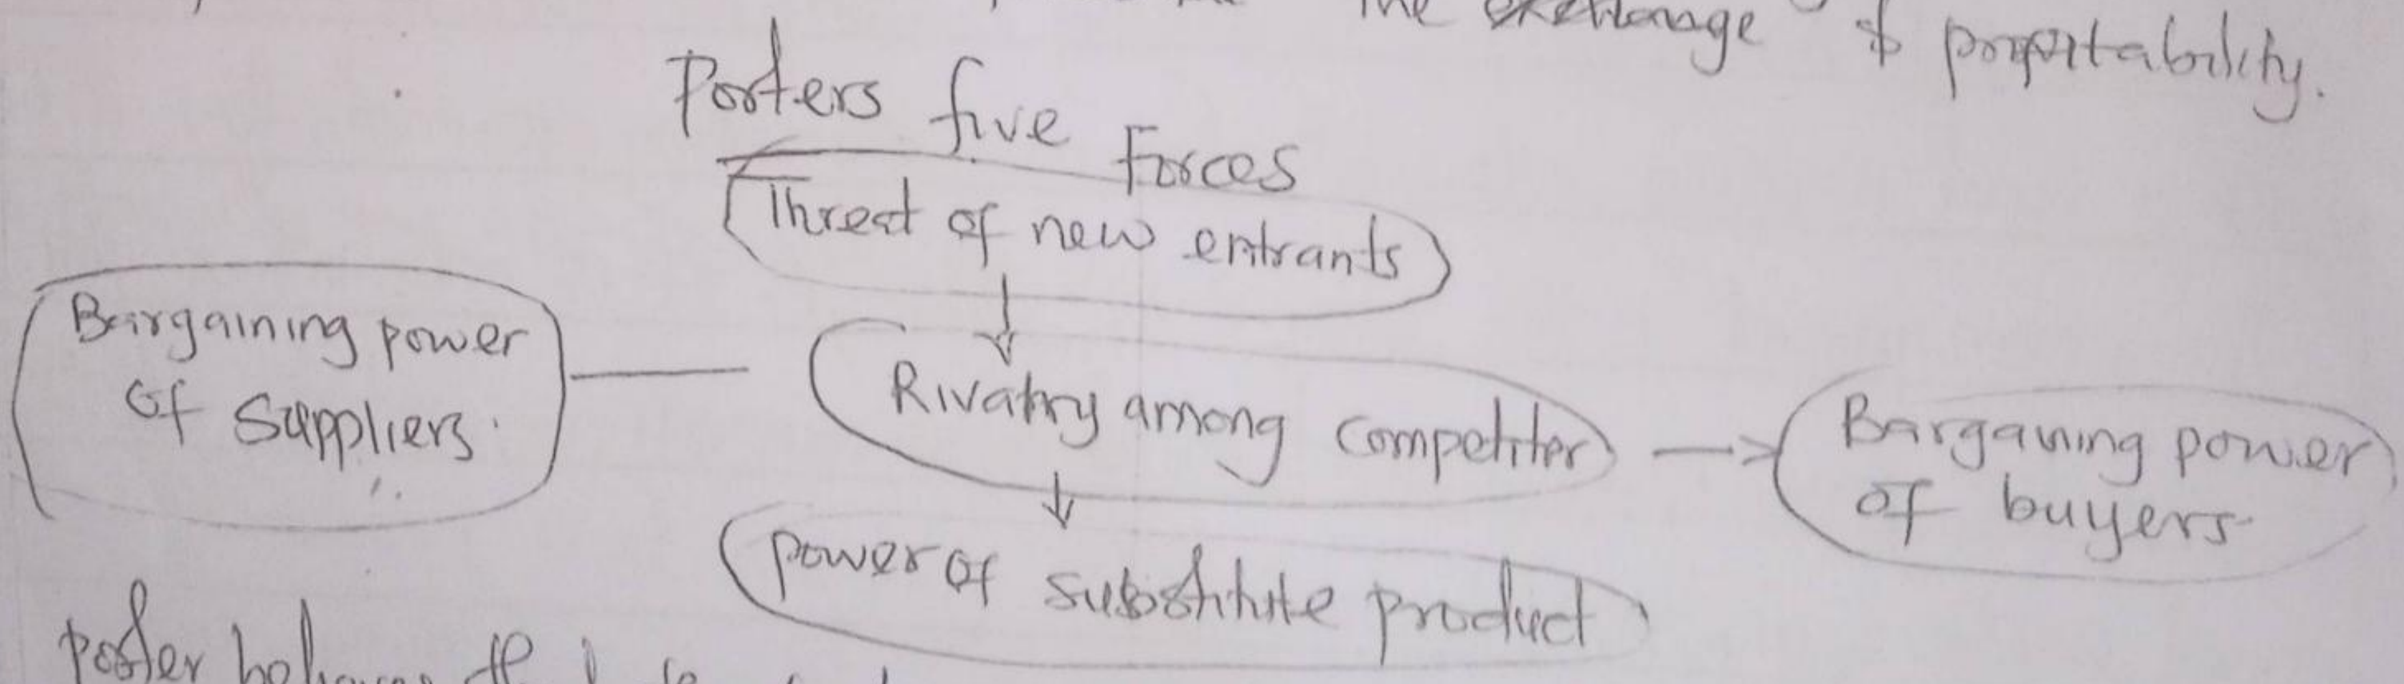

iii) Environmental forecast: This forecast will be made on the ba of determining the impact of the forecast on environment.
iv) Assessement:

Note: not every opportunity in the environment is relevant to the en -nment maybe bcos the org does not have the techniques needed to explore it.

*SWOT → Organisation will be very successful if the org matc its strength with the opportunity i.e the ones they are good with then the firm will grow.
When these occurs, their weakness will not be noticed and the threat cannot overcome the firm.
* Discover the strength then you discover the business that is best f execution i.e the opportunity.

Industrial Analysis; According to Micheal Porter, he discovered the 5 forces. Model i.e these forces the competitors, the exchange & profitability.

Porters five Forces

porter believes that the higher the competitions, the lower the profit and vice versa. i.e there is an inverse relationship btw competition & profitab

DR Akintude (PDF)

A core value statement: It explains a firm's commitment to teamwork, integrity, discipline, accountability, equal employment opportunities and other exemplary attributes.

Vision statement: This explains where a firm wants to become in future. It is also the "Reason for being". It helps for effective objective formulation and it helps firm in formulation strategy.

Mission statement is also called the creed statement, a statement of purpose, philosophy, belief & a statement of business principle <CP, P, b, BP)

FBA 411 DR Oshinowo. 04/11/22.

Topic: Business Level Strategy

What is strategy: There is difference btw goals and strategy.

goals are achieved through your objective

eg I can be the best graduating in my class (goals) not a strategy.

Every biz operates within an industry they are found in.

Strategy is about making decision in a unique way that seperates you from your competitor. Its about opportunity cost.

Internal Analysis deals with your strength & weakness, which is based on the companies resource.

Resources : These are inputs used in creating products the company needs, they are physical, either human capital, (tangible resource can be easily replicated by competitors

There are some resources that have qualities of intangibility. (these are tangible

resources embeeded in the org structure, culture, names, their loyal staffs, location Chicken Rep

their owners etc. eg The owner of KFC Org created a recipi, that is used for all their product every where in the world

www.nipr.org.ng

Professionalism & Excellence
Nigerian Institute Of Public Relations

Scanned by TapScanner

eg ~~Tim~~ Iphone Symbol, the apple

Note! Resource on it own cannot be relevant unless been used by the staff of the organisation.

The ability of the staffs to use the their resources is the capability.

Strategy; Strategy is when an org is able to maintain their level of Intangible resources are skillsets (resources that are not to be replicated) e.g brandname

Types of strategy

* Corperate level Strategy
* Business level strategy
* functional level strategy

Corperate level S.; Where decision is made at the top level or board level. I.e each of the buz units are carrying out their functions within the organisation.

* To run or function effectively there are four things to consider!

1) Where is ur org competing in eg which market eg ur buz focus on marking only wedding dress for braids alone, etc. I.e deciding what to do or what you dont want to do is the concept of strategy. Note: Strategy is about Uniqueness or how will be different among my competitors. The market is about the people buying product. Every business have an Industry structure < the structure of every bus talks about the attractive of the company. In an org u are running you must know what their objs are.

Note: Market can be ur product, your graphics etc. and then defining ur location, i.e areas where your markets are eg North, east etc also understand the bue of ur customers.

2. What unique value do you bring to the market: That is the unique value proposition. What kind of customers are the meeting, at what price, what value can my product add to the customers eg customer leave bakery one (riverly) to bakery two to buy

Scanned by TapScanner

the product (bread). When u know this value, it helps you achieve them for the company. i.e how would I be different from my competitors

3. What resources / capability do we use to achieve this value. Do we have a unique brand dat customer likes, is it the technology we are using eg Guarantee trust bank new introduction to draw down to zero b/c & build it back due to the technogy of bank just introduced bcos they defined their market & know their customers. They can be embedded in the network of company to meet the market.

4) How will ur org continue to sustain their ability to deliver (check)

Note: When employees are able to use their resources, they develop "CORE COMPETENCE" in the process

Note: price must be relative.

At biz level, the two main ways company try to ensure that they stay competitive and generate income:

1) Operational effectiveness: It doing thing over and over again, becoming efficient and competent to that thing. This can be copied bcos they can see ur machine and copy and take some step
2) Strategic positioning!) 5 porters forces are used, attractiveness of an industry.

ii) How a Company makes money to achieve (check)

i) Attractiveness of an industry

ii) How can we be different from ur competitors

You need to understand Firms operating strategy which could be:

NIPR
Professionalism & Excellence
Nigerian Institute Of Public Relations
www.nipr.org.ng

Scanned by TapScanner

2) low cost strategy: they produce low cost in production & laugh output. operational efficiency is important. Invest more in equipment, produce more quantity at a low cost. They ensure that cost of produ. is low through scale of pro

3) Differentiation: Increase quality of product, sell at premi; -um that is at high price because they sell their brand name but the consum -es they are selling. to understand, the reason for the price increment eg Diaper that is expensive, provides more comfort for baby to sleep.

Note: Corporate Level Strategy: each business unit carries out their activities for the organisation.

Scanned by TapScanner
